Francisco Acosta

Fort Worth, TX | 682-313-6403 | franciscoacosta1989@gmail.com | https://www.linkedin.com/in/francisco-acosta-tx/

Professional Summary

I build scalable, modular systems designed for high-stakes, real-time environments. Over a 16-year tenure at NBCUniversal, I transitioned from a creative lead into a systems architect, pioneering one of the first centralized news graphics departments focused on high-availability automation for our national broadcast footprint. My career has been defined by identifying systemic bottlenecks and engineering solutions before they impact production. I thrive at the intersection of high-stakes media and mission-critical engineering, bringing a "zero-downtime" discipline to every codebase I touch. I formalized this technical journey with a B.S. in Software Engineering, bridging nearly two decades of media domain expertise with backend orchestration and full-stack development.

Education

DeVry University | B.S. in Computer Information Systems (Software Engineering) | Anticipated Oct 2026

- Focus Areas: Linux Operating System, Object-Oriented Programming, Data Structures, Algorithms, Application Security and Systems Integration.
- Additional Credentials: A.A. in Information Technology (2025), A.A. in Web Graphic Design (2010)

Skills Summary

- **Technical Skills:** Solutions Architect, Application Engineering, Real-Time High-Performance Graphics, Object-Oriented Design and Programming, Distributed Systems, Data Pipeline Optimization, CI/CD and Software Development Lifecycle (SDLC).
- **Languages:** C++, C#, Python, Java, SQL, Bash, PowerShell, HTML, CSS, JavaScript, and TypeScript.
- **Transferable Skills:** Technical Leadership leading cross-functional teams, Requirement Gathering, Standard Operating Procedures (SOPs), Crisis Management, Mentorship.

Work Experience

NBCUniversal

Senior Real-Time Systems & Software Developer | April 2018 - Present

- **Engineered a centralized software suite** using .NET and C# that streamlined configuration management and validated mission-critical broadcast infrastructure.
- **Automates 400+ system combinations** across 40+ national locations by engineering a unified, data-driven template pipeline.
- **Maintain a high-percentage system uptime** for 24/7 live operations through proactive management of distributed hardware and software integration through Python based automation.

Real-Time Systems & Software Developer | July 2011 - April 2018

- **Increased data accuracy** by integrating real-time scripting to automate the link between external data sources and live visual engines.
- **Delivered high-priority digital packages** under strict deadlines through effective collaboration with technical and creative stakeholders.

Independent Contractor | February 2010 - July 2011

- **Ensured compliance** with digital delivery protocols by developing rigorous technical specifications for web-based advertising assets.
- **Successfully managed high-volume production schedules**, delivering optimized assets for live broadcast in a high-pressure environment.
