Francisco Acosta
Fort Worth, TX | 682-313-6403 | franciscoacosta1989@gmail.com | https://franciscoacosta.vercel.app/

Professional Summary

Systems Integration and Solutions Engineer with a 16-year background optimizing high-availability platform workflows, dynamic data ingestions, and system configurations across 40+ national locations. Specializes in connecting software platforms, real-time data feeds, and enterprise infrastructure under strict zero-downtime conditions. Combines a B.S. in Computer Information Systems with dual associate degrees in IT/Networking and Web Graphic Design to bridge software applications, database schemas, and operational hardware nodes.

Education

DeVry University | B.S. in Computer Information Systems (Software Engineering) | Anticipated Oct 2026

- Focus Areas: Linux Operating System, Object-Oriented Programming, Data Structures, Algorithms, Application Security and Systems Integration.
- Additional Credentials: A.A. in Information Technology (2025), A.A. in Web Graphic Design (2010)

Skills Summary

- **Architecture & Integration:** Systems Integration, Solutions Architecture, Enterprise Data Pipelines, Middleware Ingestion, Distributed Systems, High-Availability Systems, Data Sanitization & Validation, Zero-Downtime Migration.
- **Languages & Frameworks:** C#, .NET / .NET Core, Python, SQL, C++, Java, WPF / XAML, Bash, PowerShell, HTML/CSS, JavaScript, TypeScript.
- **Databases & Data Formats:** Relational Databases (SQL), Non-Relational Databases (MongoDB), REST APIs, JSON, KML, XML.
- **Infrastructure & Security:** Cloud Infrastructure (Azure), Network Protocols (TLS, VPN), Role-Based Access Control (RBAC), System Diagnostics, SOP Development.

Work Experience

NBCUniversal

Senior Real-Time Systems & Software Developer | April 2018 - Present

- **Engineered a centralized software suite** using .NET and C# that streamlined configuration management and validated mission-critical broadcast infrastructure.
- **Automates 400+ system combinations** across 40+ national locations by engineering a unified, data-driven template pipeline.
- **Maintain a high-percentage system uptime** for 24/7 live operations through proactive management of distributed hardware and software integration through Python based automation.

Real-Time Systems Developer | July 2011 - April 2018

- **Automated Data Binding:** Integrated real-time scripting to dynamically connect external data feeds with live execution engines, improving data accuracy and delivery speed.
- **Cross-Functional System Rollouts:** Collaborated with technical and operational stakeholders to configure and deploy fault-tolerant software packages under tight live-production deadlines.

Independent Contractor | February 2010 - July 2011

- **Technical Specification & Compliance:** Developed technical delivery specifications for digital assets to ensure seamless ingestion and compliance across automated publishing workflows.
- **High-Volume Asset Processing:** Managed fast-turnaround production schedules, optimizing digital media assets for live execution in high-pressure environments.
