Francisco Acosta
Fort Worth, TX | 682-313-6403 | franciscoacosta1989@gmail.com | https://franciscoacosta.vercel.app/

Professional Summary

Systems Integration Engineer with a 16-year background optimizing high-availability platform workflows, dynamic data ingestion pipelines, and system configurations across 30+ national locations. Specializes in real-time event logic, data validation, and connecting software platforms under strict zero-downtime operational constraints. Combines 16+ years of hands-on production scripting and real-time execution with a B.S. in Computer Information Systems to bridge software applications, database schemas, and operational hardware nodes.

Education

DeVry University | B.S. in Computer Information Systems (Software Engineering) | Oct 2026

- Focus Areas: Linux Operating System, Object-Oriented Programming, Systems Architecture & Integration, Ethical Hacking & Penetration Testing, Software Engineering, SDLC, Data Structures & Algorithms, Cloud Infrastructure, and Relational/NoSQL Databases.
- Additional Credentials: A.A. in Information Technology (2025), A.A. in Web Graphic Design (2010)

Production & Operational Experience (NBCUniversal)

- **Real-Time Event Systems & Logic:** Node-Based Visual Logic, Multi-Level Event Scripting (Project, Scene, Object, & Timeline Scope), State Management, Real-Time Data Binding.
- **Core Production Scripting:** Embedded VBScript, Event-Driven Execution Engines, Data Parsing & Routing.
- **Standalone Applications & Tooling:** C#, .NET Framework, WPF / XAML, PowerShell (Custom Windows Service & Data Ingestion App).
- **Architecture & Integration:** Systems Integration, Enterprise Data Ingestion, Middleware Pipelines, High-Availability Systems, Data Validation & Sanitization, System Diagnostics.
- **Leadership & Operations:** Cross-Functional Team Leadership, Requirements Gathering, Standard Operating Procedures (SOPs), Live-Production Crisis Management, Technical Mentorship.

Academic & Technical Core (B.S. CIS, DeVry University)

Software Engineering (SDLC, OOP), Cloud Computing (Azure), Relational Databases (SQL), Non-Relational Databases (MongoDB), Cybersecurity Fundamentals, Introductory C++, Java, Python.

Work Experience

NBCUniversal

Senior Real-Time Systems Developer | April 2018 - Present

- **Engineered a centralized software suite** using .NET and C# that streamlined configuration management and validated mission-critical broadcast infrastructure.
- **Automated 400+ system combinations** across 30+ national locations by engineering a unified, data-driven template pipeline.
- **Maintained a high-percentage system uptime** for 24/7 live operations through proactive management of distributed hardware and software integration through automation.

Real-Time Systems Developer | July 2011 - April 2018

- **Automated Data Binding:** Integrated real-time scripting to dynamically connect external data feeds with live execution engines, improving data accuracy and delivery speed.
- **Cross-Functional System Rollouts:** Collaborated with technical and operational stakeholders to configure and deploy fault-tolerant software packages under tight live-production deadlines.

Independent Contractor | February 2010 - July 2011

- **Technical Specification & Compliance:** Developed technical delivery specifications for digital assets to ensure seamless ingestion and compliance across automated publishing workflows.
- **High-Volume Asset Processing:** Managed fast turnaround production schedules, optimizing digital media assets for live execution in high-pressure environments.
